# OfferPredict™ Snapshot Report

University Potential & Offer Outlook: Initial Assessment

Prepared for: Alex Kim

Framework: FutureMap™ | OfferPredict™

Status: Snapshot Preview (Not Full Probability Analysis)

# Before You Read

This snapshot is an initial interpretation of your responses to the OfferPredict™ Diagnostic.

It is designed to:

- assess your current level of competitiveness
- surface early offer-chance signals
- highlight where your application is strongest and most exposed

It does not yet include:

- final offer probability percentages
- side-by-side university comparisons
- detailed admissions strategy

*Those are part of the Full OfferPredict™ Analysis.*

# Your Current Application Position

Based on your academic profile, university choices, and self-assessment, one early conclusion is clear:

**You are neither "safe" nor "uncompetitive" - you are strategically exposed.**

This means:

## **Genuine Strengths**

you have genuine strengths that admissions tutors will recognise

## **Areas of Question**

but also areas where your application is likely to be questioned

## **Strategy Dependent**

outcomes will depend heavily on how you apply, not just where

*This is exactly the type of profile OfferPredict™ is designed for.*

# Academic Readiness: What the Data Suggests

## Your academic inputs indicate:

- capability that is real, not inflated
- performance that may vary by subject
- confidence that is present, but not absolute

This creates a profile that can succeed but is sensitive to course demands and grade thresholds.

## The full OfferPredict™ analysis models how this readiness interacts with:

- specific university expectations
- course competitiveness
- grade-to-offer conversion patterns

This snapshot flags the issue - it does not yet calculate outcomes.

# University Choices: **Desire vs Reality Gap**

Your responses reveal a noticeable gap between:

## **Desire**

how much you want certain universities

## **Perceived Likelihood**

how likely you currently believe they are

 **This gap is important.**

When desire and perceived likelihood diverge, outcomes are rarely neutral - they are either strategically managed, or left to chance.

*OfferPredict™ is designed to quantify and close this gap.*

# Early Offer Probability Signal

From your inputs alone, we can already see:

## Overestimated Chances

at least one university where your chances are being overestimated

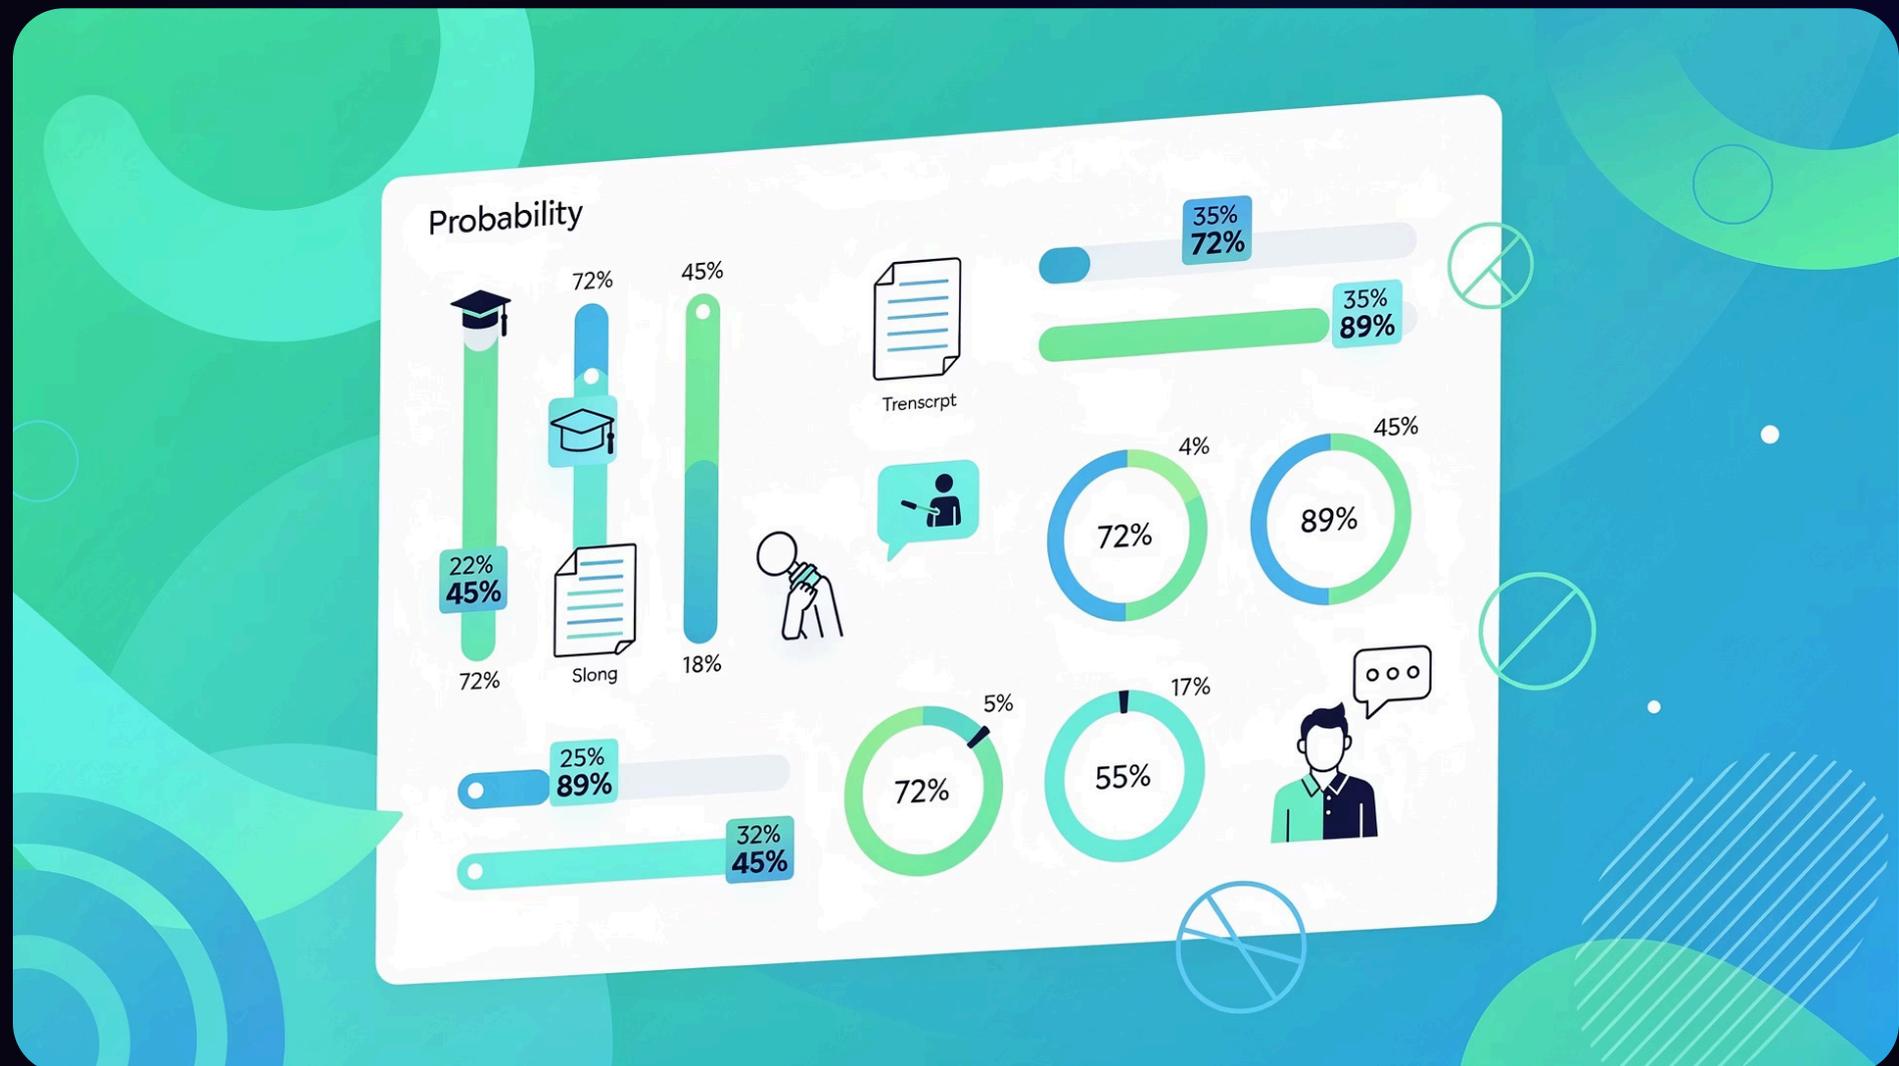

## Underestimated Chances

at least one university where your chances are being underestimated

This is common and costly when unmanaged.

*The full OfferPredict™ report assigns probability ranges (%) to each application choice.*

***Those figures are not included in this snapshot.***

# Application Evidence & Supercurricular Depth

Your responses suggest that:

- your interest in the subject is genuine
- but the strength of evidence varies

## Strengths

Some elements of your profile are likely to:

- reassure admissions tutors

## Concerns

Others may:

- feel generic
- lack clear intellectual depth
- or be under-leveraged

*The full analysis identifies exactly what strengthens or weakens your odds and why.*

# Risk Signals Admissions Tutors Notice

Several subtle risk signals emerge from your answers:

## Narrative Clarity

uncertainty around  
narrative clarity

## Uneven Confidence

uneven confidence across  
universities

## Strategy vs Hope

reliance on hope rather  
than strategy in at least one  
choice

### None of these are fatal.

But left unaddressed, they:

- reduce offer probability quietly
- without clear feedback from universities

*OfferPredict™ exists to surface these risks before decisions are made.*

# What This Snapshot Confirms

---

You are competitive – but not automatically

---

Your outcomes depend on strategy, not luck

---

Some choices are stronger than they appear

---

Some risks are currently invisible to you

---

Small changes could meaningfully shift outcomes

## What this snapshot does not yet provide:

- offer probability percentages
- side-by-side university comparison
- acceptance vs rejection risk modelling
- a prioritised improvement plan

# Your Next Step

## Why Families Usually Continue

"This already shows us where things could go wrong but we now want to know exactly how likely each outcome is."

That is the purpose of the snapshot.

### The Full OfferPredict™ Analysis includes:

#### Probability Ranges

predicted offer probability ranges (%)

#### University Comparison

side-by-side comparison of universities

#### Risk Breakdown

admissions risk breakdown by course

#### Action Plan

clear actions to improve odds

#### Expert Review

expert Cambridge review of strategy

**This snapshot shows the direction of travel.**

**The full analysis shows the numbers.**
